***Claim Rejections - 35 USC § 102***

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 1, 4-6, 8, 10, 11, 13, 16-18 and 20 are rejected under 35 U.S.C. 102(b) as being anticipated by Uchida (U.S. 5313453).

3. Uchida teaches (figure 5B, 9 and 12) a method and apparatus for generating digital traffic for use in testing a multi-port communications device comprising: generating a reference pattern defining the digital traffic and generating a plurality of traffic streams from the reference pattern, whereby the plural traffic streams are used for loading respective input ports of the communications device; and introducing a plurality of phase delays among the plurality of traffic streams when compared to the reference digital traffic pattern.

***Claim Rejections - 35 USC § 103***

4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Art Unit: 2665

5. Claims 3, 5, 7, 9, 12, 15, 17, 19, and 21 are rejected under 35 U.S.C. 103(a) as being unpatentable over Uchida.
6. Regarding claims 3, 7, 9, 12, 15, 19 and 21 as for the continuous device effecting statistical multiplexing, it would have been obvious to one of ordinary skill in this art that this would effect statistical multiplexing because the device has multiple ports.
7. Claims 22-37, 39, 40, and 43-46 are rejected under 35 U.S.C. 103(a) as being unpatentable over Uchida.
8. Uchida teaches (figures 5B, 9 and 12) device comprising an input port for receiving digital data comprising input data blocks at an input transmission rate; and N output ports for transmitting the plurality of digital data streams of output transmission rates, each output transmission rate at least equal to the input transmission rate; and delay means for introducing a predetermined delay for each replicated continuous digital data stream of the plurality of data streams with respect to the input data stream.
9. Uchida does not teach a broadcasting means, however Uchida does teach a cell generator which generates a continuous data stream.

### ***Conclusion***

10. Any inquiry concerning the communication or earlier communications from the examiner should be directed to Roberta Stevens whose telephone number is (703) 308-6607. The examiner can normally be reached on Monday through Friday from 9:00 am to 5:30 p.m.
